

Dotscreen has announced the release of a complete suite of HBBTV applications as well as innovations for second-screen applications.

Paris, 13th of September 2013 - On the occasion of the broadcast and media convention, IBC, Dotscreen (stand 2B39d), a company specialising in multi-screen user interfaces, has announced that it is rolling out a set of applications under the European HBBTV standard as well as second-screen app innovations for smartphones and tablets.

Marketing of an HBBTV application suite

The suite includes a portal and VOD applications, Catch-up TV, electronic programme guide, radio/audio, weather, zapping banner, traffic news, horoscope and news. It is offered under licence to all television channels and digital operators (satellite, cable, ipTV, DTTV).

This software suite comes to add to the catalogue made up of some **twenty HBBTV applications currently being broadcast**, mainly by TF1, France Télévisions, France24, Globecast, TDF and Fransat.

Loads of new functionalities for second-screen applications

- **A partnership with TDF based on audio recognition technology (digital fingerprinting).** Incorporated into the TéléStar electronic programme guide, available for smartphones and tablets, this new functionality will, in particular, enable TV advertisers, not only to synchronise advertising messages with their TV spots in the application in real time, but also to be able to enrich the current TV programme with various types of content (recommendations, social TV, etc.).
- **An ongoing project with the French group Sagemcom** to work together to develop "companion apps" that will run under any technical environment (iOS, Android, Windows8, etc.). This project will take form at the end of the year with a major European operator who will offer such functionalities as the control of set top boxes, viewing of TV programmes on the second screen, or the transcoding of available videos into OTT by the set-top box.
- **Development of the TéléStar application under Tizen, Samsung's new OS.** This new-generation programmes guide is now available on main operating systems such as iOS and Android as well as on all screens (smart TV, OTT, HBBTV, TV set top boxes, Smartphones, tablets).
- **The creation of a second screen application** for the daily program "Ca Vous regarde" broadcast by the French **parliamentary channel, LCP**. It will be available on Apple and Android tablets by the end of September. For Dotscreen, this will be the second application to be synchronised with a TV programme after the "C'est a vous" app on France5.

It should be noted that this summer Dotscreen rolled out many applications: Deezer for set-top boxes and game consoles, Doctissimo TV for Plush tablets and DVDPost on smart TV in the Benelux, Samsung smart radio on sur connected TV, RTL Astro on set-top boxes and smart TV and What's that track for Orange Livebox Play.

About DOTSCREEN

The firm has two main activities: designing and developing multi-screen applications (smart TVs, set-top boxes, HbbTV, gaming consoles, smartphones, tablets, car radios...) for leading media, web and telecommunications firms (TF1, France Télévisions, Al Jazeera, Deezer, Auféminin, Doctissimo, Lagardère, Mondadori, 20Minutes, Euronews, Radio Télévision Suisse, Numéricâble, Bouygues Télécom, TDF, etc.); and editing multi-screen video services for a global audience (TéléStar, MeteoNews TV, Infotrafic TV, Mon Quotidien).
